

# Aastra 700™ Components

**The A700 is an “all-in-one” communications solution addressing the needs of small and medium-sized enterprises with up to 1,000 users.**

It is based on the well established MX-ONE portfolio and consists of a number of bundled base blocks and a set of optional components. A700 combined with its applications gives the right mix of components to provide a complete solution.

## A700 Telephony System

The primary building block of the A700 is the Telephony System. This is the telephony engine of the IP-PBX and consists of a telephony server and a media gateway. Both Telephony System and Media Gateway can be simply integrated into your existing IT environment. The A700 supports virtualization, so the Telephony System and the optional applications run on a single server.

## A700 Managers

A700 Manager Provisioning handles all user and service related tasks for the entire solution from one interface. There is no need to switch between different tools when defining new users. New users will be defined for all relevant applications such as Telephony Server, OneBox and the Contact Management Suite (CMG). In addition, Manager Provisioning integrates with the company’s Active Directory. So, when new employees are added, adding telephony extensions and features is a breeze! Manager Telephony System provides a web-based GUI for configuring the Telephony System.

## Aastra OneBox

Aastra OneBox provides you with total control over all your messages. It is fully compatible with Microsoft Outlook®, Lotus Notes® and Novell Groupwise® and offers everything from basic voicemail to a comprehensive unified messaging system.

## Aastra InReach™ Attendant Console

Aastra InReach attendant console offers you a wealth of tools like advanced attendant functionality, instant messaging, corporate directories, call logs and presence profile management. The Aastra InReach attendant console offers efficient support through a large number of integrated functions ensuring high quality attendant performance.

## Aastra Mobile Client

With the Aastra Mobile Client (AMC) you can maximize your communication system investment for your mobile workforce. AMC is a mobile terminal client creating automatic access to Aastra Mobile Extension service for cellular integration to your communication system. It allows mobile users to use short number and extension dialing in combination with AMC, for utilizing traditional communication system services as if they were using their normal functions from the desk phone. The Mobile Least Cost Routing feature minimizes mobile roaming expenses having the call setup routed through the least costly path. Mobile costs can further be reduced using AMC’s dual mode functionality which automatically and seamlessly moves calls from the cellular to WiFi network when the employee is within range.

Symbian, iPhone, Android, Blackberry mobile devices

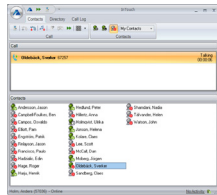

## A700 components

### Aastra Solidus eCare™

Solidus eCare™ offers IP and mobility-enabled contact center solutions for enterprises of all sizes and delivers full IP-based contact center capabilities. Solidus eCare comes empowered with Mobile Extension, allowing the contact center agents access to the same functionality regardless of where they are located, i.e., at the head office premises, branch office premises, and/or at any other remote location.

### Aastra InTouch™

Aastra InTouch™ is a feature-rich soft-phone and unified communications client. Besides making and receiving calls from a PC desktop, it provides users with activity/presence and Instant Message services, as well as full integration with back-office contact and calendar suites. It is also the interface of choice for call center agents in combination with the Solidus eCare contact center suite.

### Aastra Endpoints

The A700 supports a wide range of endpoints to suit the needs of various users. These range from entry level, value-priced to high-end executive deskphones, soft clients and analog phones. In addition to its capabilities of tight integration with mobile phones, the A700 offers wireless DECT phones for mobility within the office environment. And, as an open standard platform, the A700 supports any SIP-compliant third-party endpoint.
